

H2a: Manifesto vs. speech share of the salience agenda, by topic

Hollow point = manifesto share, filled point = speech share (party colour); the line is the manifesto-to-speech shift. Shared axis, Aggregation A, primary specification.

Levels, not differences: a party can move down on a topic and still lead it (the AfD's migration share falls from 16% to 9% but stays far the highest; the Linke's welfare share falls from 32% to 21% and stays the highest). Both channels show every party over-weighting system-and-procedure and foreign-policy content.
