

## H2b: Directional moderation in parliamentary speech [EXPLORATORY]

Polarization score: signed within-domain balance of directional sub-labels (scheme B)

Axes fixed to the score range [-1, 1] with equal aspect, so the dashed line is a true 45-degree diagonal (perfect consistency). Solid: per-domain OLS. Slope < 1 is moderation, seen as a flatter cloud; a cloud sitting off the diagonal is a level shift (see migration, above the diagonal). Welfare is a tight far-left cluster, so its labels are thinned. Directional layer exploratory ( $\kappa(B) = 0.456$ ; Section 3.5).
