

### H3 robustness: polarization trend slope, all parties vs excl-AfD [DESCRIPTIVE, EXPLORATORY]

OLS slope of Dalton-weighted polarization on LP, per domain and channel. AfD: speech channel from LP 19; manifesto channel from LP 19

Coinciding points = the time trend is not an AfD-entry artefact. The LEVEL/compositional decomposition is in H2c. Directional layer exploratory ( $\kappa(B) = 0$ )
