

H4 — System-level polarization over time

Per-domain Dalton-weighted polarization across LPs 13–20.

Manifesto channel weighted by vote share; speech channel weighted by seat share.

Polarization = $\sqrt{S_{pw} \cdot (pos_p - \mu)^2}$ where μ is the weighted mean position.

Vertical reference line at LP 18.5 marks AfD entry into Bundestag (LP 19, 2017).

Per-domain decomposition shows post-2017 shifts concentrated in Europe (both channels) and Migration (speech channel).
